SUMMARY

Full Stack Developer with 6+ years of experience building scalable enterprise applications using Java (11/17), Spring Boot, microservices, and modern frontend technologies (React/Angular). Experienced in designing high-performance systems, developing REST APIs, and working with cloud and DevOps tools including Docker, Kubernetes, and CI/CD pipelines. Strong background in secure authentication (OAuth 2.0, JWT), database management (PostgreSQL/MySQL), and delivering reliable solutions in Agile environments.

SKILLS

Languages: Java 11/17, TypeScript, JavaScript, SQL, Python

Backend: Spring Boot, Spring Cloud, Spring Security, RESTful APIs, Microservices, OAuth 2.0, JWT, GraphQL, WebSockets, OpenAPI/Swagger, Node.js, Kafka

Frontend: Angular, React.js, Redux, Zustand, Context API, React Native, HTML5, CSS3

Databases: PostgreSQL, MySQL, RabbitMQ, Redis, MongoDB

Cloud & DevOps: Docker, Kubernetes, Jenkins, CI/CD Pipelines, AWS (EC2, Lambda, S3, CloudWatch, API Gateway), Bitrise, GitLab CI/CD

Testing: JUnit, Mockito, Selenium, Jest, Postman, RestAssured

Monitoring: ELK Stack (Elasticsearch, Logstash, Kibana), Firebase Crashlytics, Real-time Dashboards

Methodologies: Agile/Scrum, Microservices Design Patterns, Event-Driven Architecture, TDD, Cross-Functional Team Collaboration

Mobile Development: React Native, Firebase, Supabase

EXPERIENCE

Full Stack Developer | Brainvire Infotech Inc | USA

Feb 2024 – Present

- Built and maintained Spring Boot microservices (Java 17) for asset inventory and license tracking, improving visibility across 1,000+ enterprise assets.
- Developed React.js dashboards with Redux to visualize data and simplify reporting for business users.
- Implemented RBAC security using Spring Security and JWT/OAuth 2.0 to protect sensitive data and enforce access control.
- Integrated CI/CD pipelines via Jenkins and Docker, automating builds, testing, and deployments, ensuring near-zero downtime and reliable releases across development, staging, and production environments.
- Worked on event-driven architecture using Kafka and optimized performance with Redis caching for real-time updates.
- Improved code quality by writing tests using JUnit, Mockito, and Selenium; monitored systems using the ELK stack, helping identify issues early and reduce downtime.

Full Stack Developer (Volunteer / Part-time) | DevLaunchers | USA

Oct 2025 – Present

- Designed and developed a modular user profile system using React, improving scalability and maintainability; built a complete Edit Profile experience (Bio, Skills, Interests, Details) with smooth and consistent UI interactions.
- Implemented state management using Context API (Constate) for profile updates, change tracking, and save/discard functionality.
- Integrated backend services using REST APIs (Axios) for real-time data updates; optimized performance using useMemo, useEffect, and efficient state handling to reduce unnecessary re-renders.

Software Developer | Capgemini | India

Oct 2019 – Jul 2023

- Developed e-commerce mobile features using React Native, Redux, and Redux Saga for brands like Victoria's Secret and Boots, improving user experience and handling complex user flows at scale.
- Implemented key features including payments (Postpay, Tabby), card scanning, search (Algolia), and dynamic content rendering (WebView) to streamline checkout and user interactions.

- Integrated tools like Firebase Crashlytics, Dynamic Yield, and event tracking to monitor performance, debug issues, and enhance user engagement.
- Wrote unit tests using Jest, improving code reliability and reducing production bugs.
- Optimized performance and deployments using React Navigation, Bitrise, GitLab CI/CD, and code reviews, ensuring stable releases across multiple devices.
- Engineered event-driven messaging systems with Kafka and RabbitMQ, implementing real-time notifications, workflow escalations, and caching with Redis, reducing IT request resolution time by 40%.
- Validated microservices, APIs, and UI workflows through TDD with JUnit, Mockito, Selenium, and Postman, ensuring bug-free releases and 35% higher software reliability in production environments.

PROJECTS

Maintenance Hub — Mobile Application

- Built a maintenance management mobile app using React Native and Supabase, enabling users to raise service requests, track status, and manage assets in real-time.
- Implemented role-based workflows (Admin, User, Staff) to streamline task assignment and improve operational efficiency.
- Integrated backend services for authentication, data storage, and real-time updates, improving visibility and reducing manual processes.
- Designed scalable microservices architecture to support high-volume enterprise workflows.

ShopGadgets — E-Commerce Application

- Built ShopGadgets, a full-stack e-commerce platform with a React admin dashboard and React Native mobile app for product management and shopping.
- Implemented secure backend using Supabase with authentication, RLS, and Stripe integration for real payment flow.
- Designed scalable architecture with separate admin and user flows, ensuring secure data handling and a production-ready system.

EDUCATION

Master of Science, Computer Science | Auburn University | USA

Aug 2023 – May 2025
